Example of Reflow Soldering Condition

- 1. Heating method: Double heating method with infrared heater.
 2. Temperature measurement: Thermocouple ϕ 0.1 to 0.2 CA (K) or CC (T) at soldering portion (copper foil surface). A heat resisting tape should be used for fixed measurement.

Slide Switches / Soldering Conditions

3. Temperature profile

| Series (Reflow type) | | A (℃) 3s max. | B (℃) | C (s) | D (°C) | E (℃) | F(s) | |
|----------------------|-------------------------------|--|-------|-------|--------|-------|------|-----|

| | Vertical | 1-pole, 2-position | 250 | | | | | |
| SSAG, S | SSAG, SSAJ, SSAL, SSSS8, SSS7 | | 260 | | | | | |

Notes

- 1. The condition mentioned above is the temperature on the mounting surface of a PC board. There are cases where the PC board's temperature greatly differs from that of the switch, depending on the PC board's material, size, thickness, etc. The above-stated conditions shall also apply to switch surface temperatures.
- 2. Soldering conditions differ depending on reflow soldering machines. Prior verification of soldering condition is highly recommended.
